

Specification chooser

Just Mulch & Just Binder:

For simple landscaping areas and most pathways and other areas where safety, durability and technical performance may be less important we can utilise some cheaper production methods and offer the Just Mulch product range at one of the lowest prices on the market for self-install and basic trade installation projects.

Ecobond Mulch & Ecobond binder:

For areas such as regulated playgrounds and others needing certainty on coverage rates, fall height protection, toxicity, flammability, tested durability and the longest colour retention then the Ecobond materials system is the professional's choice for self-install and trade installation projects.

Gummibond:

This is what we call the market leading Ecobond system (as above) when it is installed by us and is offered with a meaningful 5 year warranty

In the following chart, you may want to ask, 'why does it matter?' or 'what are the consequences?' so we invite you to call us for further clarity on any subject as we have far too much information to detail here.

We are in an unparalleled position in the marketplace as we are the only industry provider with control over every aspect material, production and installation processes and are responsible for installing 10's of 000's of square metres of our own material every year and give every mm of it a 5 year warranty, and have been doing so for many years without problems.
